HM CLAUSE
Home Garden

CORA F1

The earliest spring variety

- Early variety suitable for spring and early summer conditions
- Produces fruit even under difficult light or cold conditions
- Medium-green, cylindrical fruit
- Easy to grow and harvest in the garden: Open growth habit with short internodes and a nice stem.
- Organic seeds available

Typology
Green cauliflower

Number of seeds per gram
6-9

Sector
Young plant producers, Seed packet companies

Color
Verte

Fruit shape
Cylindrical

Organic
Yes

Fruit size
Diameter : 4-8 cm
Length : 18-23 cm

Product cultivation

Disease resistance
IR : CMV

Earliness
Yes

Sowing period
Mid-February to April

Planting period
From mid-March (under cover), then in open ground after the last frosts until early June

Harvest
Mid-May to September

Cycle
Précoce

Additional information

Open ground direct sowing (minimum surface soil temperature 14-16°C), in seed trays directly or with transplanting, in soil blocks or pots using a moist but not soggy substrate. Germination temperature 23-25°C (2-3 days). Transplanting after cotyledon unfolding. Growing conditions: night 14-15°C min, day 16-20°C min.
Gradually aerate the nursery to ensure the seedlings don't get leggy and to harden them off before planting (e.g. by finishing growing them outdoors). Growing period: 10-15 days depending on the season and soil block size. Using seedlings results in an earlier harvest.

IMPORTANT : The descriptions, illustrations, photographs, advice, suggestions and vegetation cycles that may be presented herein are aimed at home gardeners exclusively and are derived from observations made in defined conditions on various trials. They are offered in all good faith, for purely informational purposes, and shall not therefore, under any circumstances, be held to be exhaustive, be taken as any form of guarantee of harvest or performance, prejudge specific factors or circumstances (either current or future), and more generally, form any kind of contractual undertaking whatsoever. The user must first and foremost ensure that his exploitation conditions, local geographical conditions, his planned growing period, his soil, the means at his disposal, his resources and his equipment, and more generally his agronomical, climatic, sanitary and environmental context are suitable for the crops, techniques and varieties that are presented herein. All the varieties illustrated in this publication were photographed in favourable conditions and no guarantee can be provided that results will be identical under different conditions.
