## ● Product cultivation

### Disease resistance

HR : Bl: 29-40 ; Nr:0

### Sowing period

Late August to late January

### Planting period

September through October and February through March outdoors. November through February in a sheltered area

### Harvest

Mid-October to late April

### Cycle

Mid-early

---

## ● Additional information

Seedlings in plugs: Coated seeds; optimal temperature 15–20°C; avoid temperatures above 20°C, especially in summer (cover the plugs, provide shade, and water more frequently). If possible, sow in a germination chamber (24 hours) at controlled temperatures. 5 to 10 days after emergence, gradually increase ventilation in the nursery, ensuring the seedlings are hardened off before planting (e.g., by moving them outdoors at the end of the growing season).

**IMPORTANT** : The descriptions, illustrations, photographs, advice, suggestions and vegetation cycles that may be presented herein are aimed at home gardeners exclusively and are derived from observations made in defined conditions on various trials. They are offered in all good faith, for purely informational purposes, and shall not therefore, under any circumstances, be held to be exhaustive, be taken as any form of guarantee of harvest or performance, prejudge specific factors or circumstances (either current or future), and more generally, form any kind of contractual undertaking whatsoever. The user must first and foremost ensure that his exploitation conditions, local geographical conditions, his planned growing period, his soil, the means at his disposal, his resources and his equipment, and more generally his agronomical, climatic, sanitary and environmental context are suitable for the crops, techniques and varieties that are presented herein. All the varieties illustrated in this publication were photographed in favourable conditions and no guarantee can be provided that results will be identical under different conditions.
