Orange

Fruit shape

Globe Haut

Fruit weight

3-4 kgs

● Product cultivation

Disease resistance

IR Px ; ZYMV

Sowing period

Avril-Mai

Planting period

Mi-Mai à Juin

Harvest

Septembre à Octobre

Cycle

Très tardif

● Additional information

Semis direct en pleine terre (température minimale du sol en surface 14-16°C), en terrine avec repiquage ou directement en mottes ou godets. Température de germination 23-25°C (2-3 jours). Repiquage au stade cotylédons étalés. Elevage nuit mini 14-15°C, jour mini 16-20 °C. Aérer progressivement la pépinière pour veiller à ne pas laisser filer les plants et les durcir avant plantation (fin de l'élevage en extérieur par exemple). Durée d'élevage du plant : 10-15 jours selon la période et dimension de la motte. L'utilisation de plant apporte plus de précocité.

IMPORTANT : The descriptions, illustrations, photographs, advice, suggestions and vegetation cycles that may be presented herein are aimed at home gardeners exclusively and are derived from observations made in defined conditions on various trials. They are offered in all good faith, for purely informational purposes, and shall not therefore, under any circumstances, be held to be exhaustive, be taken as any form of guarantee of harvest or performance, prejudge specific factors or circumstances (either current or future), and more generally, form any kind of contractual undertaking whatsoever. The user must first and foremost ensure that his exploitation conditions, local geographical conditions, his planned growing period, his soil, the means at his disposal, his resources and his equipment, and more generally his agronomical, climatic, sanitary and environmental context are suitable for the crops, techniques and varieties that are presented herein. All the varieties illustrated in this publication were photographed in favourable conditions and no guarantee can be provided that results will be identical under different conditions.
