● Product cultivation

Disease resistance

HR: BI:32 IR: LMV

Earliness

Yes

Sowing period

February to March, then mid-July to late August

Planting period

March to April, then mid-August to mid-September

Harvest

May to June, then late September to mid-November

● Additional information

Soil block sowing: Coated seeds: optimal temperature 15-20°C, avoid temperatures above 20°C, particularly in summer (cover the soil blocks, provide shade, drench more frequently). If possible, sow in a germination chamber (24 hours) at controlled temperatures. 5 to 10 days after sprouting, gradually aerate the nursery to harden the seedlings off before planting (e.g. by finishing growing them outdoors).

IMPORTANT : The descriptions, illustrations, photographs, advice, suggestions and vegetation cycles that may be presented herein are aimed at home gardeners exclusively and are derived from observations made in defined conditions on various trials. They are offered in all good faith, for purely informational purposes, and shall not therefore, under any circumstances, be held to be exhaustive, be taken as any form of guarantee of harvest or performance, prejudge specific factors or circumstances (either current or future), and more generally, form any kind of contractual undertaking whatsoever. The user must first and foremost ensure that his exploitation conditions, local geographical conditions, his planned growing period, his soil, the means at his disposal, his resources and his equipment, and more generally his agronomical, climatic, sanitary and environmental context are suitable for the crops, techniques and varieties that are presented herein. All the varieties illustrated in this publication were photographed in favourable conditions and no guarantee can be provided that results will be identical under different conditions.
