Fruit size
Diameter : 3-4cm
Length : 20-22 cm

Fruit weight
200-300g

Product cultivation

Disease resistance
HR: Ccu
IR: Co:1 ; Pcu ; Px ; CMV ; Psl

Earliness
Yes

Sowing period
March through Mid-July

Planting period
Starting in early April (in a cold frame), then in the ground after the last frosts until mid-August

Harvest
Late May through September

Additional information

Sow in a tray or mini-clod in a moist but not waterlogged growing medium; transplant as a clod or into a pot. Germination temperature: 25–26°C (4–5 days). Transplant when the cotyledons are fully expanded at 20–22°C. Grow at a minimum of 16–17°C at night and 18–22°C during the day. Plant hardening-off period: 15 to 20 days, depending on the season and root ball size. Grafting is possible to increase vigor and yield.

IMPORTANT : The descriptions, illustrations, photographs, advice, suggestions and vegetation cycles that may be presented herein are aimed at home gardeners exclusively and are derived from observations made in defined conditions on various trials. They are offered in all good faith, for purely informational purposes, and shall not therefore, under any circumstances, be held to be exhaustive, be taken as any form of guarantee of harvest or performance, prejudge specific factors or circumstances (either current or future), and more generally, form any kind of contractual undertaking whatsoever. The user must first and foremost ensure that his exploitation conditions, local geographical conditions, his planned growing period, his soil, the means at his disposal, his resources and his equipment, and more generally his agronomical, climatic, sanitary and environmental context are suitable for the crops, techniques and varieties that are presented herein. All the varieties illustrated in this publication were photographed in favourable conditions and no guarantee can be provided that results will be identical under different conditions.
